

problem statement

Create Student Record Management Program using structures to store information for five students. Each student record should contain the admission number, student name, course, age, and CAT marks. The program should use functions to capture student information, display the information, and calculate the average CAT marks.

ALGORITHM

tep 1: Start.

Step 2: Declare an array for 10 student marks.

Step 3: Enter the 10 marks.

Step 4: Calculate the total marks.

Step 5: Calculate the average mark.

Step 6: Find the highest mark.

Step 7: Find the lowest mark.

Step 8: Display the average, highest, and lowest marks.

Step 9: Display the marks above the average.

Step 10: Stop.

SOURCE CODE

```
#include <stdio.h>
```

```
struct Student
```

```
{
```

```
    char admission[20];
```

```
    char name[30];
```

```
    char course[30];
```

```
    int age;

    float cat;

};

void capture(struct Student s[])
{
    int i;

    for(i = 0; i < 5; i++)
    {
        printf("\nStudent %d\n", i + 1);
        printf("Admission Number: ");
        scanf("%s", s[i].admission);
        printf("Student Name: ");
        scanf("%s", s[i].name);
        printf("Course: ");
        scanf("%s", s[i].course);
        printf("Age: ");
        scanf("%d", &s[i].age);
        printf("CAT Marks: ");
        scanf("%f", &s[i].cat);
    }
}
```

```
void display(struct Student s[])  
  
{  
  
    int i;  
  
    printf("\nSTUDENT RECORDS\n");  
  
    for(i = 0; i < 5; i++)  
  
    {  
  
        printf("\nStudent %d\n", i + 1);  
  
        printf("Admission Number: %s\n", s[i].admission);  
  
        printf("Student Name: %s\n", s[i].name);  
  
        printf("Course: %s\n", s[i].course);  
  
        printf("Age: %d\n", s[i].age);  
  
        printf("CAT Marks: %.2f\n", s[i].cat);  
  
    }  
  
}  
  
float average(struct Student s[])  
  
{  
  
    int i;  
  
    float total = 0;  
  
    for(i = 0; i < 5; i++)  
  
    {  
  
        total += s[i].cat;
```

```
    }  
    return total / 5;  
}  
  
int main()  
{  
    struct Student student[5];  
    printf("Registration Number: YOUR_REGISTRATION_NUMBER\n");  
    capture(student);  
    display(student);  
    printf("\nAverage CAT Marks = %.2f\n", average(student));  
    return 0;  
}
```
